Fixation cylinder ZyRillo®-PE

The problem

Even inconspicuous details can lead to thermal bridges and cause condensation or mould. For this reason, attachments that are screwed to the insulated facade must be installed without thermal bridges and with a force-locking connection.

The solution

Fixation cylinders ZyRillo®-PE are particularly suitable as mounting brackets for lightweight third-party assemblies, such as hose clamps, hangers, fasteners, etc.

Our quality

Various screws such as M-screws, wood screws or sheet metal screws can be used. The corrugated envelope surface guarantees, in combination with the PU-Adhesive DoPurCol, a permanent bonding with the EPS insulating panel.

Your advantages

- ✓ No thermal bridges
- ✓ Simple and rational assembly
- ✓ Can be used with all insulation thicknesses from 80 mm

The product

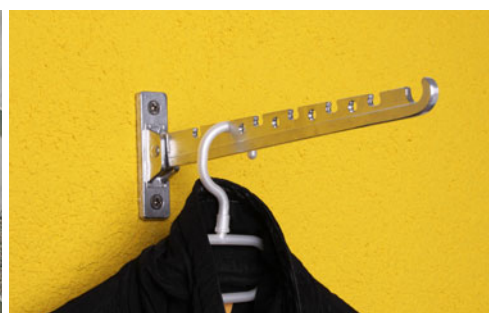

Fixation cylinders ZyRillo®-PE are formfoamed cylinders. They are made of highgrade plastic and have wave-like lateral surfaces. They are available in two different diameters.

Dimensions

- Diameters: 70 / 125 mm
- Useable surface diam.: 50 / 105 mm
- Useable thickness for screw connection: 22 mm
- Thickness: 70 mm

Fastening material

- Adhesive: PU-Adhesive DoPurCol
